Categories: [Wax And Depilation](#), [Hot Wax Elasticated](#)

Product Description

XN Wax Pebbles Yellow 1000g

Formulated to minimize irritation, with the emollient, restorative action of honey, this hair removal wax is specifically formulated for dry, flaking skins. Particularly soft and elastic, it is ideal for those who regularly perform whole-body hair removal or need minor corrections in specific zones.

1. Pour Pebble Wax into a wax warmer. Turn warmer on and heat wax for approximately 20 minutes. Do not melt the wax completely; wax should be a thick consistency in the center and soft around the sides. 2. Before hair removal, check if the wax temperature is comfortable by dipping an applicator into the wax and applying a small amount to the inside of the wrist. If wax runs off the applicator, it's too hot ? the wax should cling to the applicator. 3. To begin waxing, cleanse the skin. Next, apply an even layer of hard wax in the opposite direction of hair growth, and then back down to encapsulate the hair. For a better grip to remove wax, leave a thicker edge of wax when applying it. 4. Allow the wax to cool on the skin until the wax hardens. Then raise the thicker edge at the end of the strip and remove it quickly, pulling against the direction of hair growth. 5. After hair removal, apply a post-wax lotion. Advantages of Film Wax: ? Lower melting temperature 104°F ? 115°. ? Ideal for hair removal on delicate areas (armpits, bikini, face). ? Longer cooling time, which provides longer thermal exposure, relaxes hair follicles and makes waxing less painful. ? Completely adjustable to the skin surface, catching all the hairs without applications repeating. ? Because of its extra elasticity Film Wax won't break during hair removal. ? When removed, Film Wax does not leave any broken hairs. ? Significantly

reduces the time required for depilation procedure.
